

## **Broan-NuTone® Introduces 3 Speed Custom Range Hood Power Pack to Kitchen Ventilation Portfolio**

*The insert protects cabinetry with an optional stainless steel liner while providing 450 MAX Blower CFM*

**HARTFORD, Wis.** (March 23, 2022) – Broan-NuTone® has introduced the new Broan® 21" Custom Range Hood Power Pack (PM400SS). The power pack is the latest in the company’s hidden ventilation alternatives for the kitchen, offering homeowners endless design possibilities while applying a simple, behind-the-scenes solution that eliminates smoke and odors without ever being noticed.

Now widely available, the powerpack insert is ideal for custom range hood applications. It helps to achieve a custom look and protect cabinetry with optional stainless steel liners and features a smooth, stainless-steel surface that is easy to clean with quick-release dishwasher-safe filters. This 3 speed powerpack insert delivers up to 450 Max Blower CFM for fast removal and odors from the kitchen. The bright 1-level LED lighting enhances the cooking experience and has been tested in a variety of environments to ensure long life without dimming. The PM400SS also features exclusive EZ1 clips, designed to make it easy for one-person installation.

The Broan® 21" Custom Range Hood Power Pack is ENERGY STAR® certified, Home Ventilating Institute (HVI) certified and can be used to comply with industry-leading code requirements like Title 24 (Part 6, Range Hood Requirements).

“We hope that by continuing to offer homeowners, builders and HVAC professionals a wide array of cutting-edge custom range hood products, we can make a larger impact in the industry as a whole,” said Edwin Bender, Broan-NuTone Vice President of Marketing. “Not only aesthetically pleasing, but this new power pack is also the perfect application for a custom kitchen where automation and energy-saving is just as important as blower speed and long-lasting, bright lighting.”

With increased awareness and a heightened concern of airborne threats in the home, owners have sought to better understand the multiple sources of poor indoor air and implement advancements in ventilation systems such as range hoods. According to the Environmental Protection Agency (EPA), indoor air can be 2 to 5 times more polluted than outdoor air and the kitchen is a primary source of poor indoor air quality through excessive moisture, smoke, cooking odors and other airborne particulates.

With the primary source of poor indoor air quality being the kitchen, every kitchen needs ventilation. We provide performance matched ventilation solutions for every cooking style and the type of application beneath it.
